THE FOODIFY COMPANY · LETSFOODIFY.COM

The new storefront, screen by screen

Every page of the new website, shown on a laptop and on a phone. This is the design — the live site has not changed yet.

Prepared for	Nalin Agarwal, The Foodify Company
Prepared by	Mindlayer
Date	8 November 2026 (second edition: search, boxes, delivery dates, repeat orders)
Status	For review. Nothing here is live until you approve it.

How to read these pages

Each of the next pages is one screen of the site: the wide picture is a laptop, the tall one beside it is the same page on a phone.

One website, two shapes

The phone screens are the same website re-flowing to a small screen — not a separate app to download. Indian food shopping happens mostly on phones, so the tall version is the one to judge hardest — though we do not have your analytics yet to put a number on it.

The photography is missing on purpose

Every cream box marked “photography placeholder” is where a real photo of the prepared dish goes. Booking that shoot is the single biggest visual upgrade left.

The words and numbers are samples

Product names and prices come from your catalogue. A few values were invented so the pages look finished — they are listed by name under “What needs your word”, near the end.

What the design is trying to do

Six minutes is the product. Prep time is on every card, ahead of price. · **Show the food, not the pouch.** · **No surprises after the cart.** Delivery is shown before checkout, never added at the end. · **Earn trust honestly.** No fake viewer counts, no invented reviews. · **Designed for a phone first.** Nothing a customer reads is smaller than 16px; nothing they tap is smaller than a thumb.

What follows

3–4 Home · 5 Search · 6 Category · 7–8 Combos · 9 Build your own box

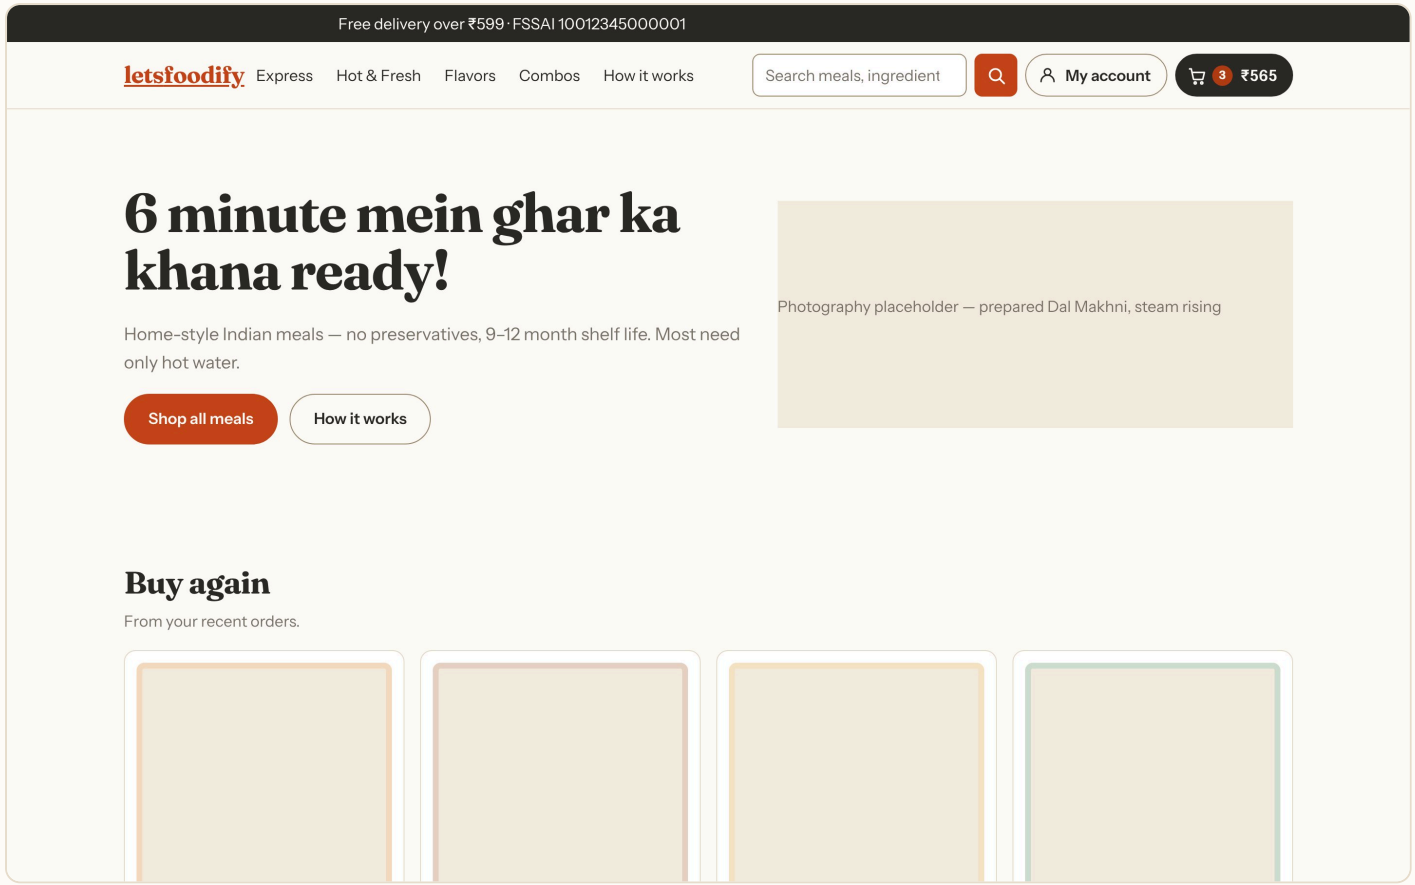

10–11 Product · 12 Delivery date and offers · 13 Reviews · 14 Filters · 15 Cart · 16 Checkout

17 Account · 18 After the order · 19 Refer a friend · 20 The usability review · 21–22 What needs your word · 23 Next

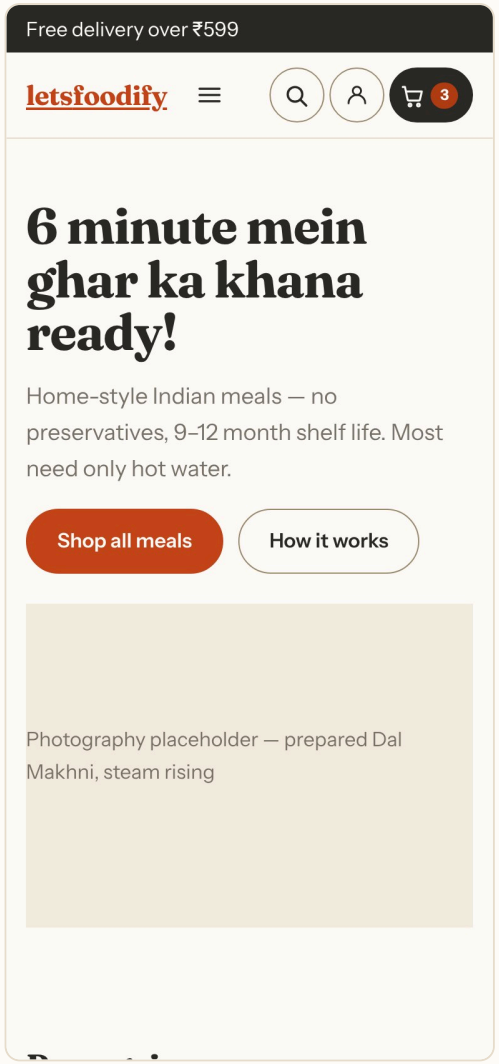

HOME

The first ten seconds

A first-time visitor decides here whether this is real food and whether to trust the shop.

LAPTOP · TOP OF THE HOME PAGE

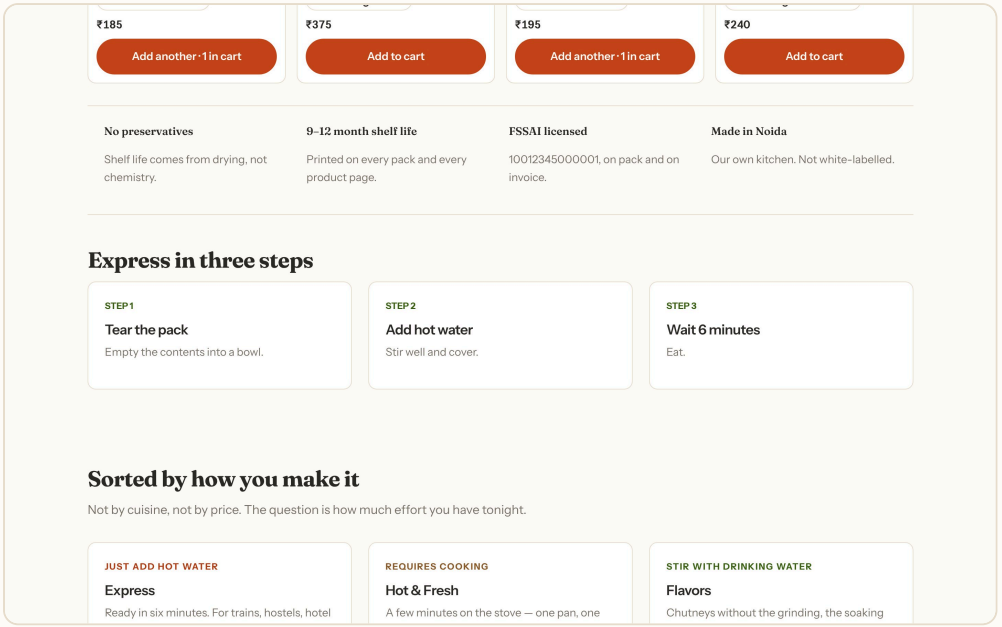

PHONE · THE SAME PAGE

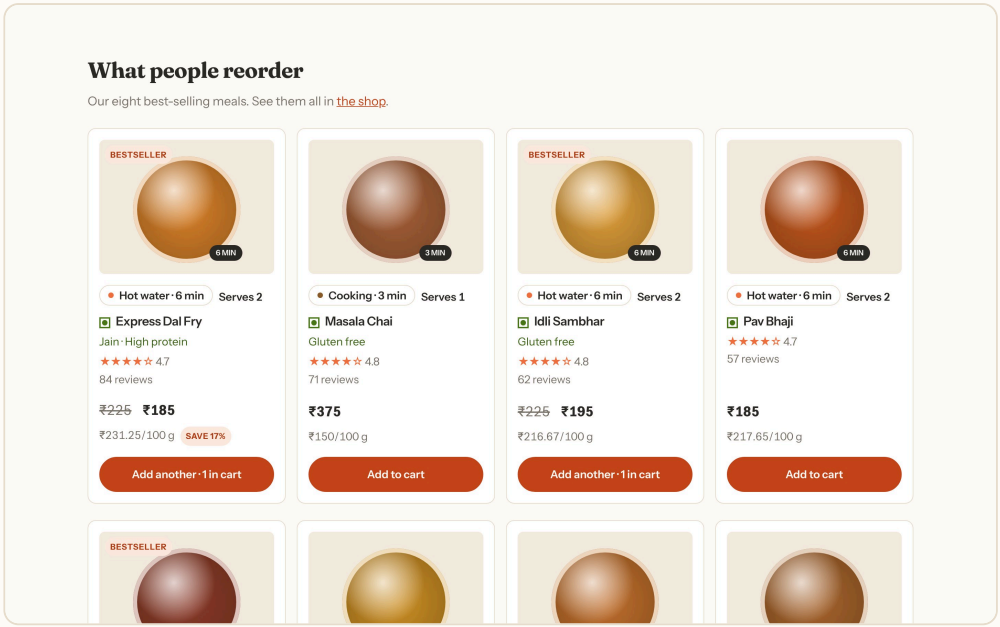

- The claim is the headline — **6 minute mein ghar ka khana ready!** — and it is the only claim the site makes about time. It is written in one place, so it can never say six on one page and ten on another.
- The four facts under it answer what a first-time buyer actually asks: no preservatives, how long it keeps, who is licensed, who cooks it.
- **Three steps, six minutes** explains the product without a video and without a paragraph.

HOME

Further down the page

Eight best sellers, not a wall of products — the audited site put 140 product tiles on the homepage for a catalogue of 44.

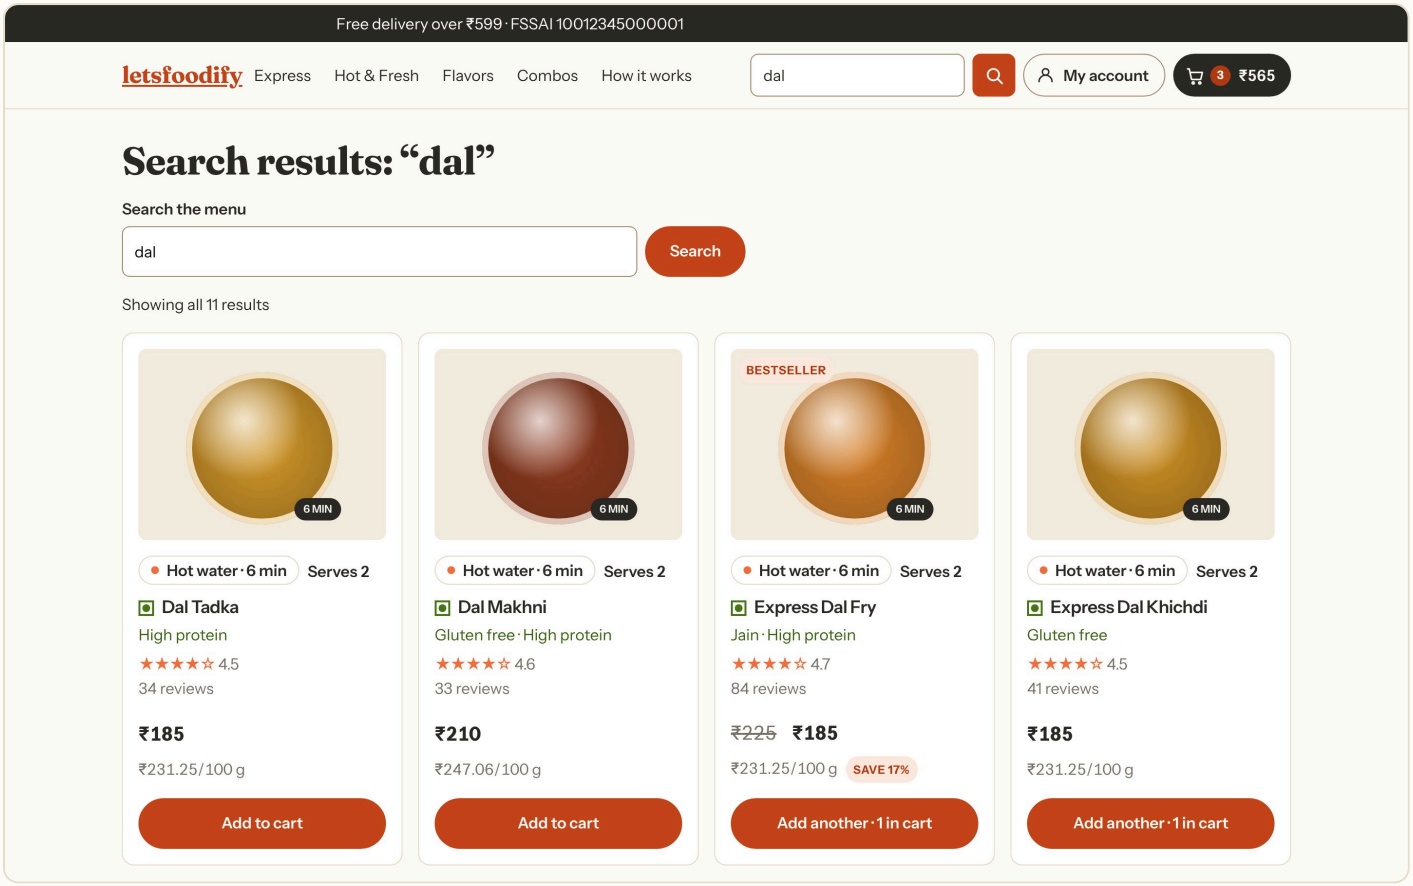

- **What people reorder** — eight products, chosen by how often they sell, refreshed automatically.
- **Sorted by how you make it** — hot water, cold water, cooking: the way a customer decides.
- Reviews carry real names and a verified-purchase mark, and only appear once real customers leave them.
- The trust strip repeats the four facts at the point where a hesitant buyer scrolls back up.

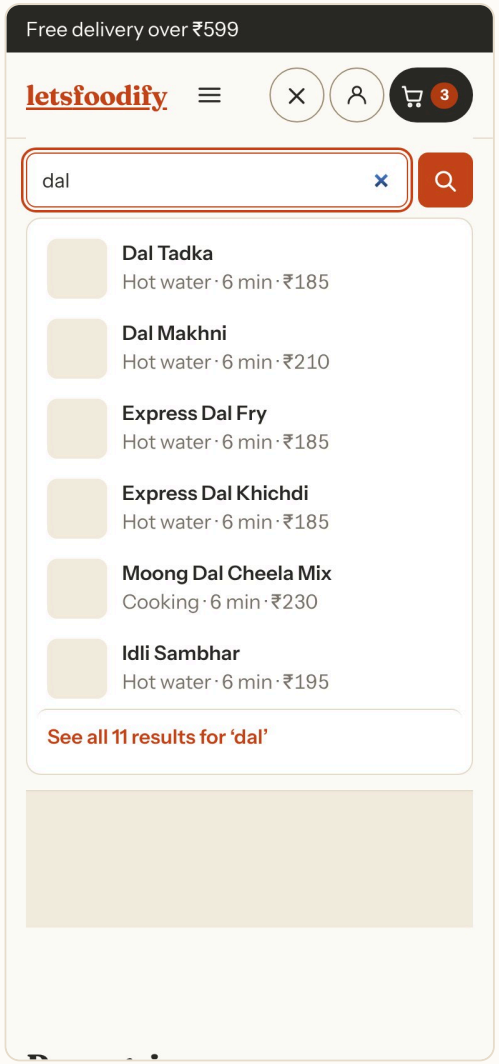

SEARCH

Finding a meal by name

With 44 products, people type what they want. The audited site had no search at all.

LAPTOP · THE RESULTS PAGE FOR “DAL”

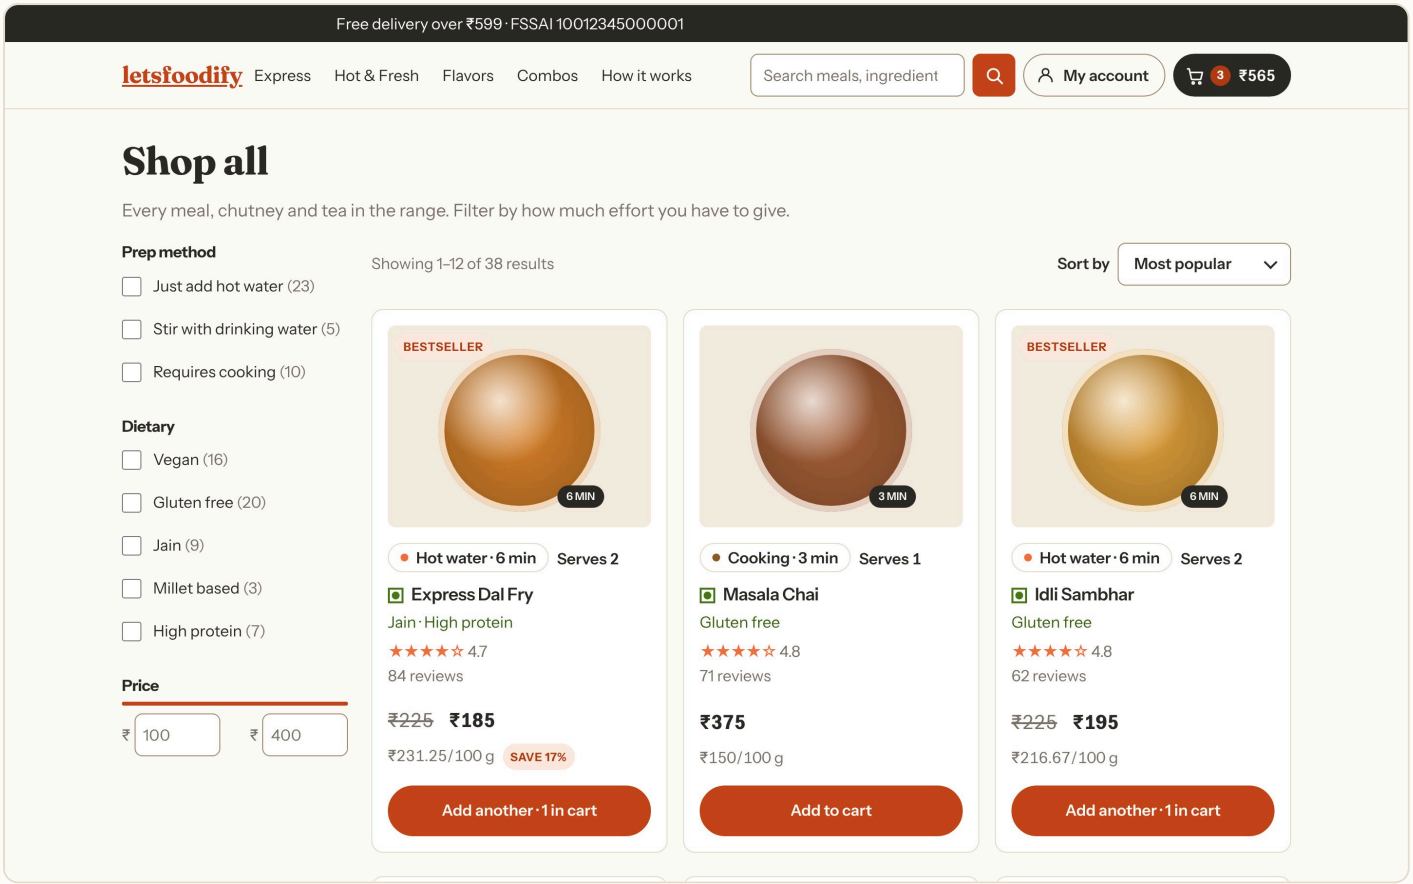

PHONE · SUGGESTIONS WHILE TYPING

- **Suggestions appear as you type**, from the second letter, with the prep time and price — tap one and you are on its page.
- It finds **ingredients and other names too**: “dal” finds the khichdi, and once you add Hindi and regional names (“राजमा”, “rajma chawal”) those work as well.
- A small typo still finds the dish. Sold-out items come last, marked as sold out.
- **No match is never a dead end**: it says so and offers three popular meals.

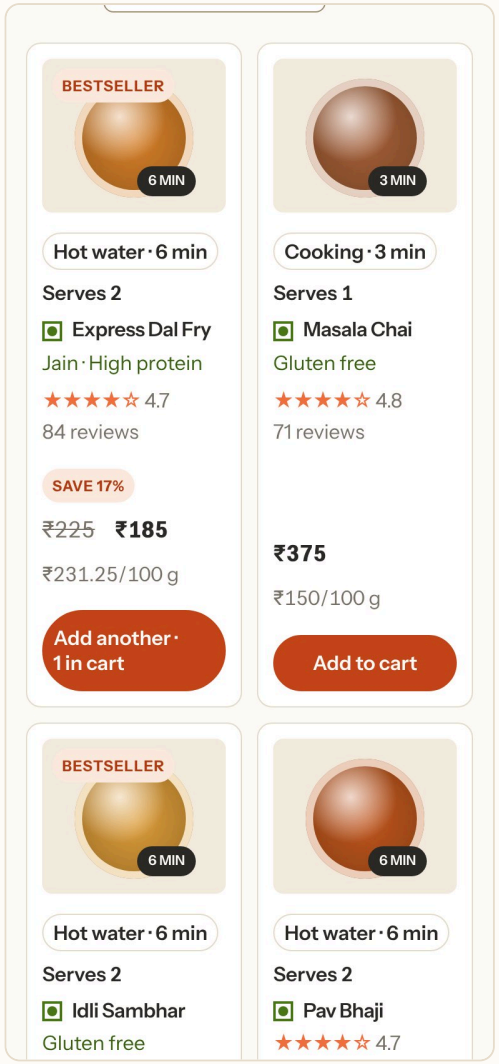

CATEGORY

Choosing a meal

The page a customer lands on from Google or from the menu, and the one that has to make 44 products easy to narrow down.

LAPTOP · CATEGORY PAGE WITH FILTERS OPEN

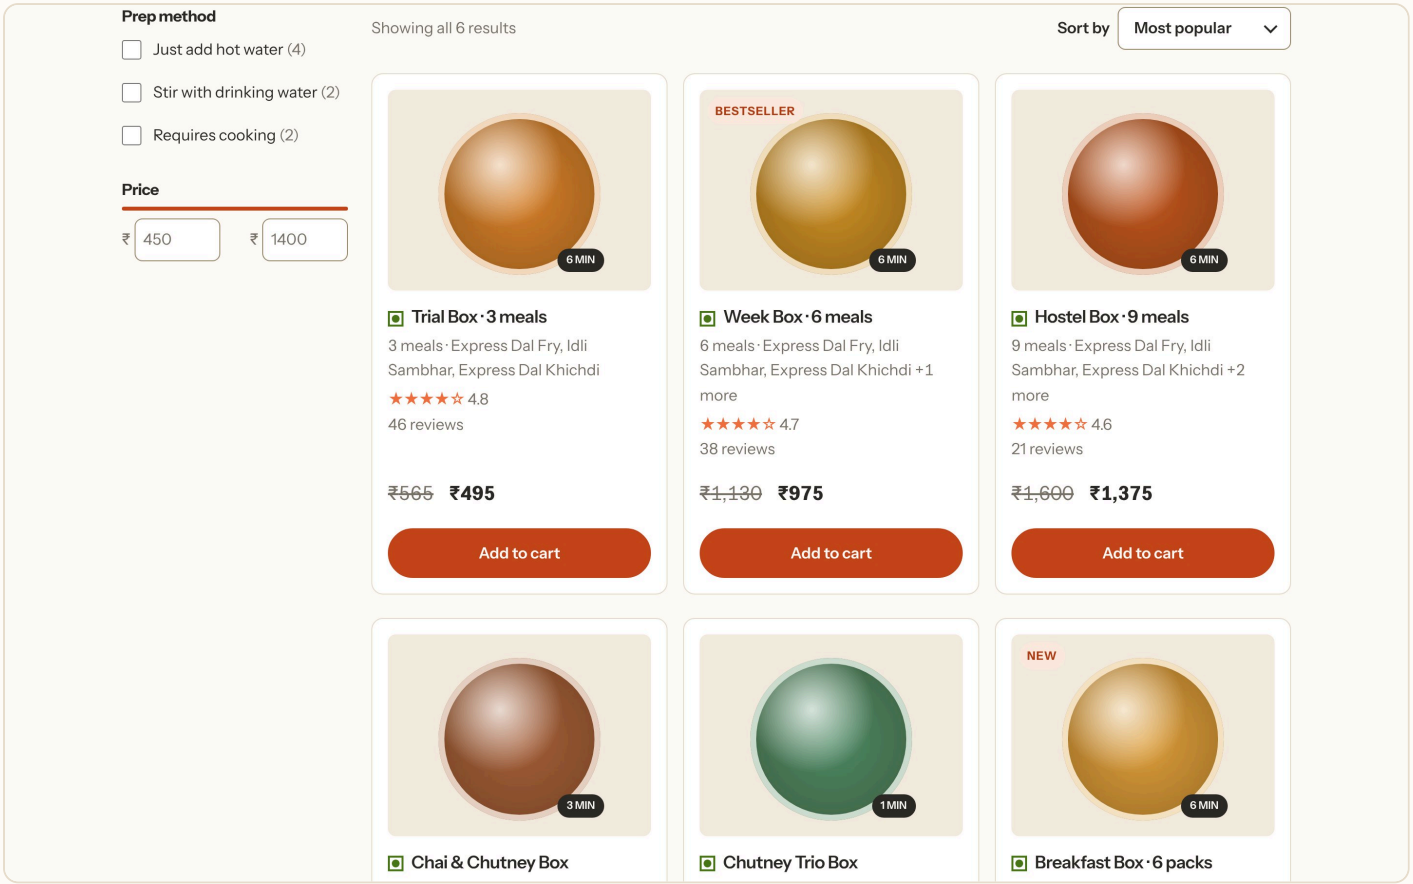

PHONE · FILTERS FOLDED, WITH A COUNT

- **Filters by what matters here**: prep method, dietary, price. Open beside the products on a laptop; on a phone one **Filter** line that says how many are on — "Filter · 2" — so the products come first.
- **Sort is a labelled control** next to the result count, and the count is announced to screen readers when a filter changes it.
- Every card **leads with how it is made** — "Hot water · 6 min", then servings — and carries Jain, vegan or gluten free as words, not a badge on the photo. A **Save badge appears only when the discount is genuinely 15% or more**.
- Sold-out items say **Sold out**, sit at the end of every sort, and offer "Notify me" instead of Add to cart. Once a meal is in the cart its button reads "Add another · 1 in cart".

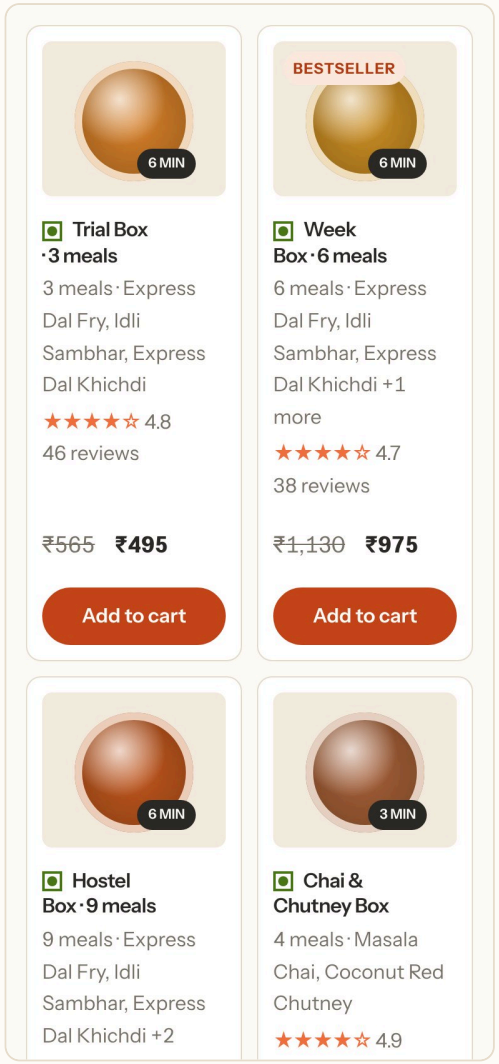

COMBOS

A box of several meals

The Combos category has existed in the menu since the start with nothing behind it. This is what a pack of meals looks like.

LAPTOP · THE COMBOS CATEGORY

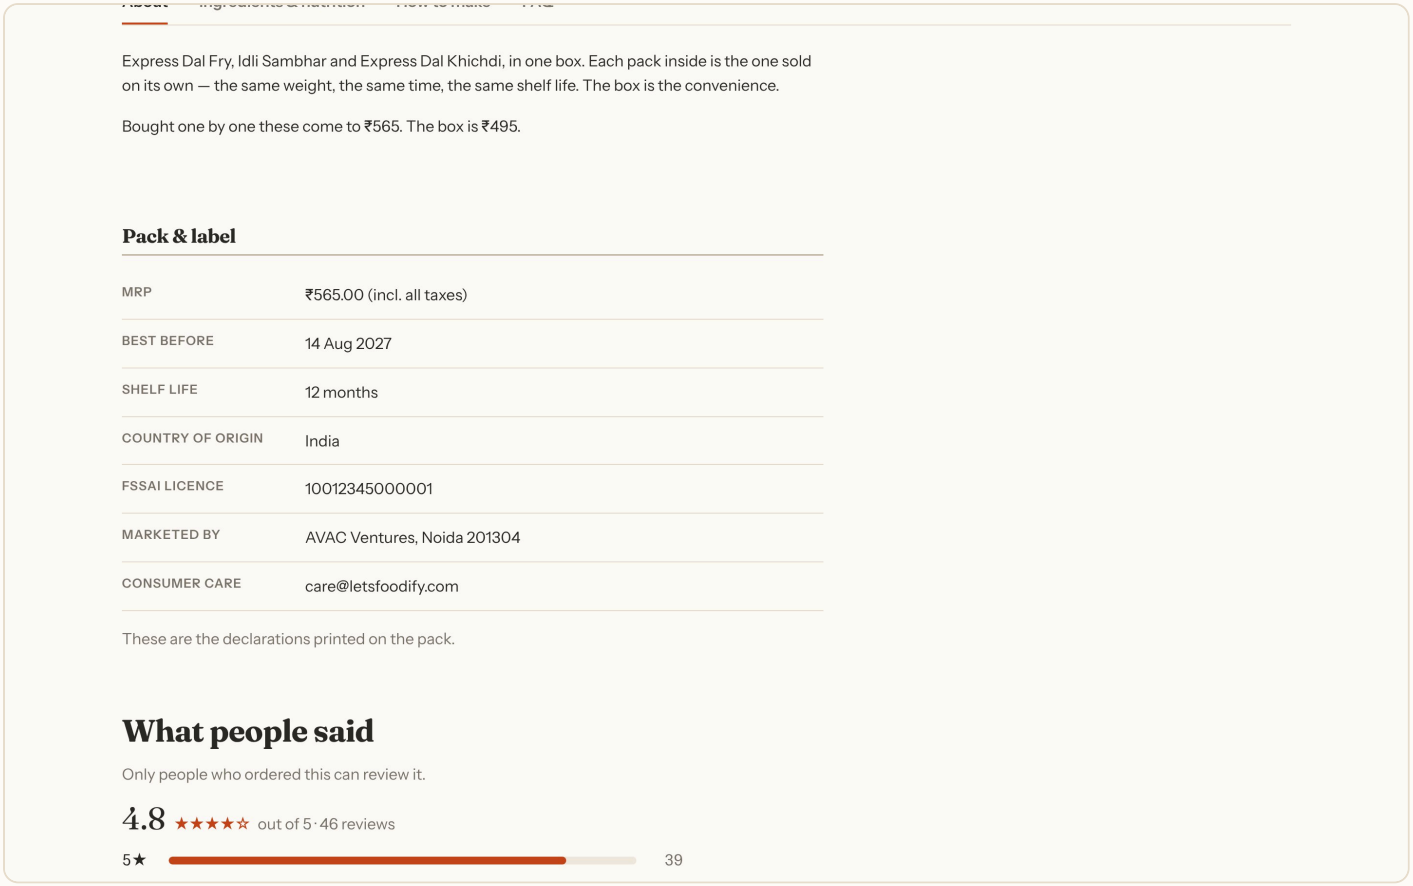

PHONE · TWO BOXES ACROSS

- **The card says what is in the box** — "3 meals · Dal Fry, Idli Sambhar, Dal Khichdi" — instead of the servings line a single pack carries. Four names and it counts the rest, rather than truncating a word.
- **The saving is in rupees, against a figure you enter**: what those same packs cost bought one by one. No figure, no saving shown — a box that is not cheaper is still a convenience, and an invented discount is the pattern this rebuild is removing.
- Boxes carry the same badges as any other product, so a bestselling box or a Jain box reads the same way everywhere.

COMBOS

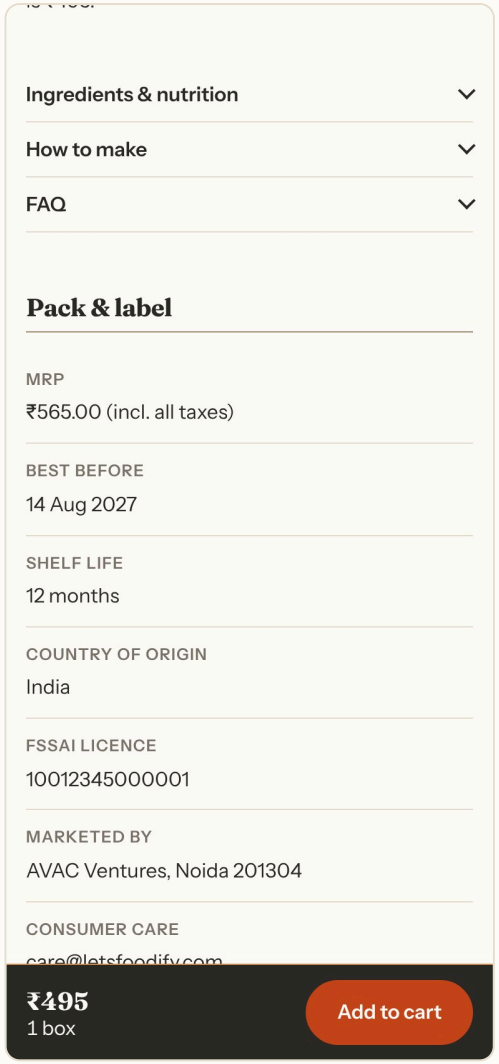

What is inside the box

The first question a combo buyer asks is not “what is it?” but “what do I get?” — so the answer sits above the tabs, not inside them.

LAPTOP · THE BOX’S OWN PAGE

- **The contents are a list with counts**, read down the left like a packing slip — not a sentence a buyer has to parse.
- **₹175 per meal** is arithmetic, not marketing: the box price divided by the number of meals, rounded down so it can never flatter the pack.
- The strip under the price counts **meals and per-meal price** where a single pack counts grams and servings.
- Every pack inside keeps its own label and its own product page; the box does not pretend to declare for all three.

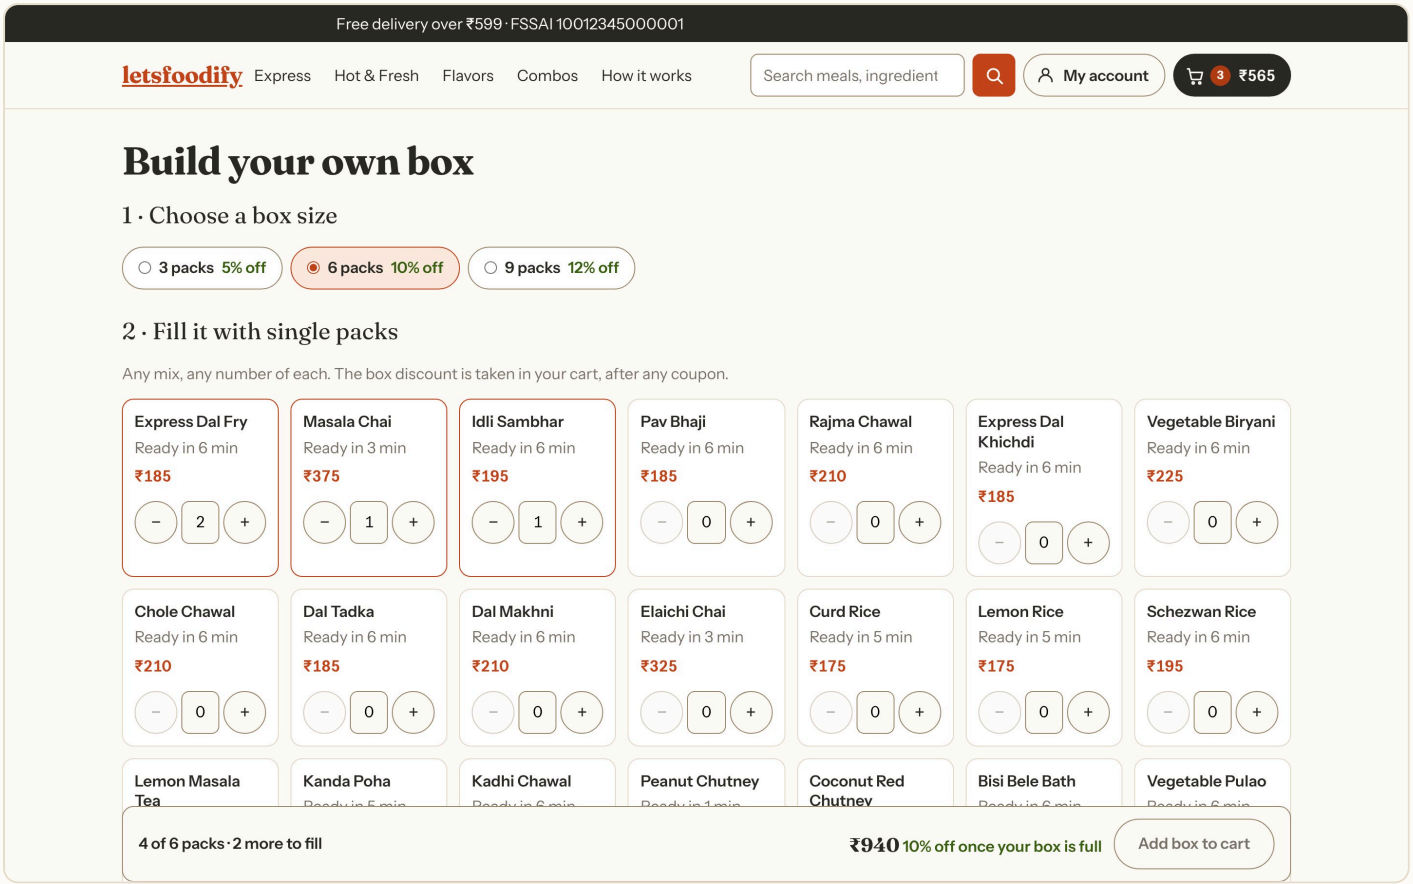

PHONE · THE SAME PANEL

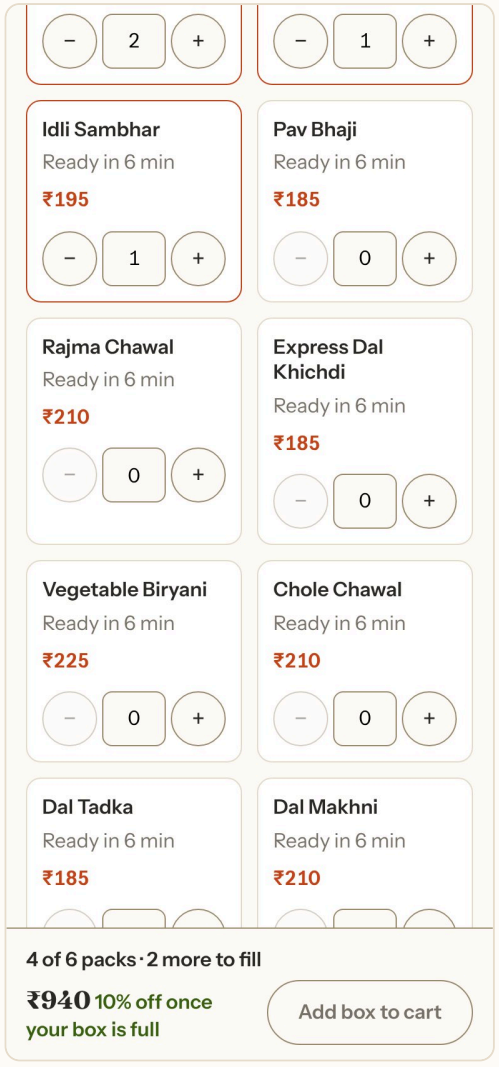

COMBOS

Build your own box

The fixed boxes suit most people; this is for the customer who knows exactly what they want.

LAPTOP · A 6-PACK BOX, PART FILLED

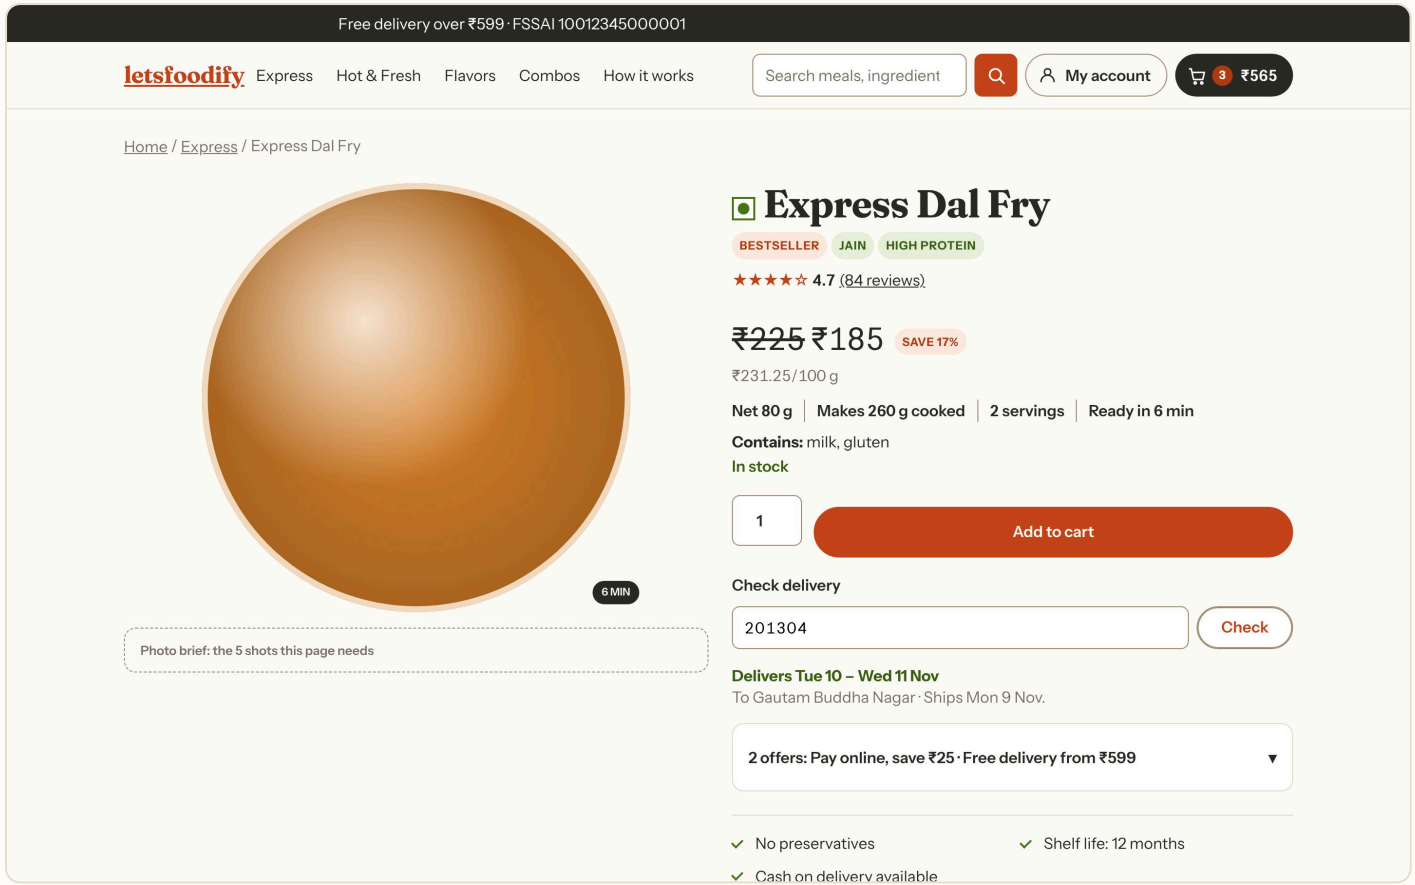

PHONE · THE RUNNING TOTAL STAYS IN VIEW

- **Choose a size, then fill it** with any mix of single packs. The bar keeps count: “4 of 6 packs · 2 more to fill”.
- **The discount is shown before you add the box**, and it is exactly what the cart charges — worked out the same way, rounded down to the rupee.
- In the cart the packs stay separate lines marked “6-pack box”. Take one out and the discount goes, with a message saying how to get it back.
- Sizes and discounts are yours to set. Until you do, the page says boxes are coming soon and sells nothing.

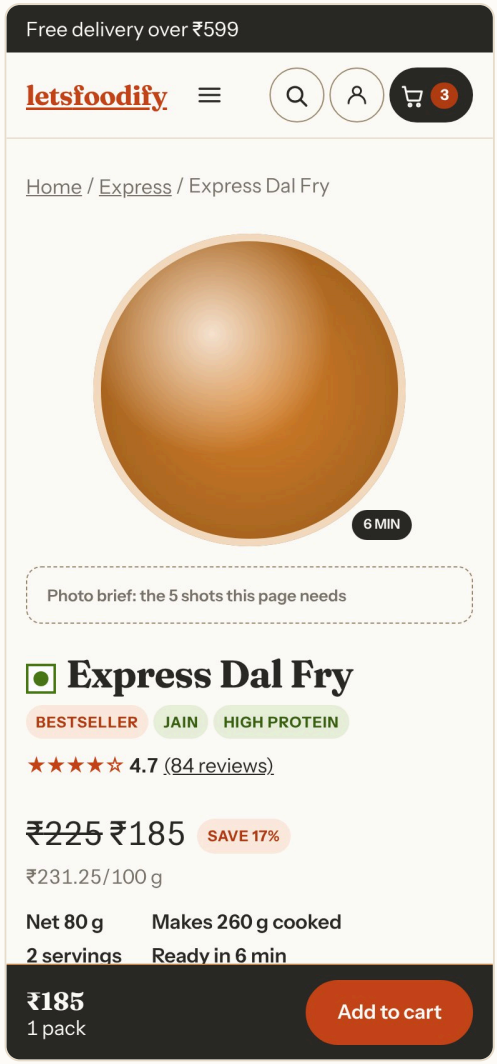

PRODUCT

The page that sells

Everything a buyer needs before they commit, in the order they ask for it.

LAPTOP · TOP OF A PRODUCT PAGE

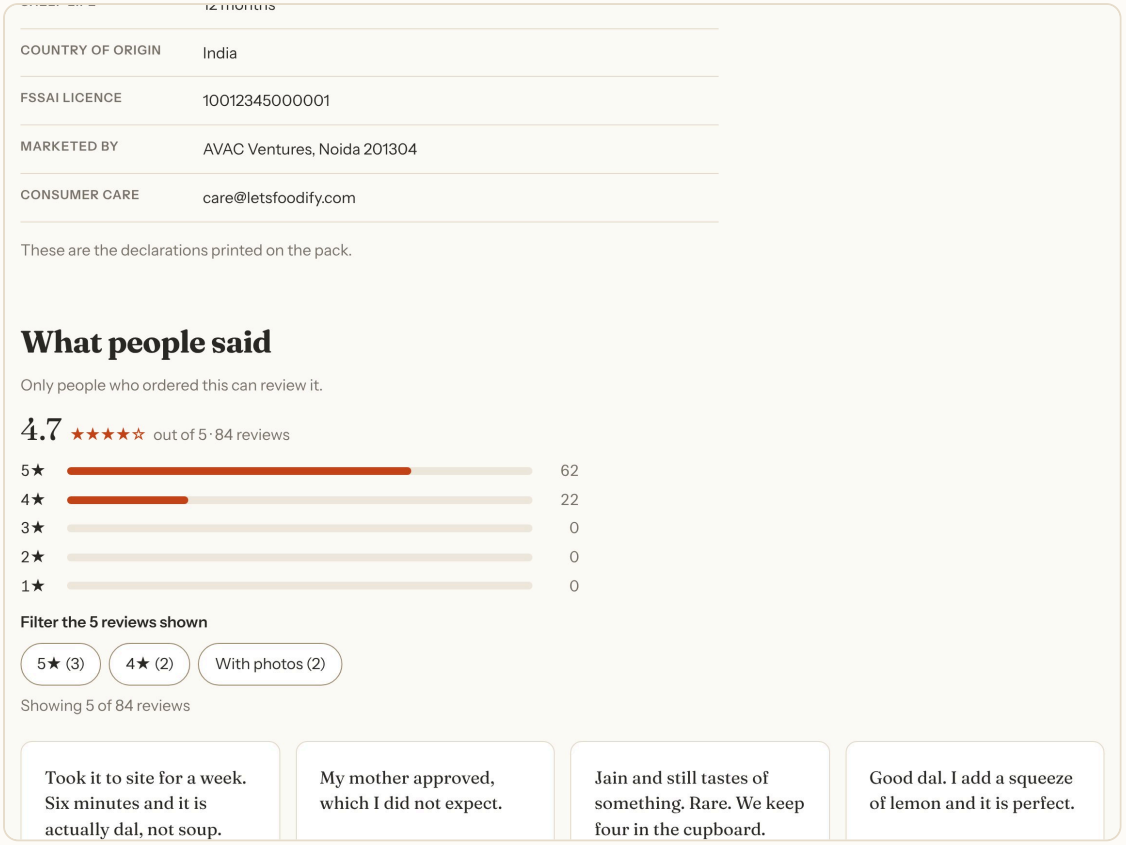

PHONE · STICKY ADD TO CART

- The **green vegetarian mark** sits beside the name, the **price per 100 g** under the price, and a one-line **Contains: milk, gluten** above Add to cart, so an allergy is checked before the tap, not after.
- Under Add to cart, in the order a buyer asks: what is in a combo, **Check delivery** — a PIN gives a real date — and **Offers** as one closed line, “2 offers: pay online, save ₹25 · free delivery from ₹599”. Each comes from the shop’s settings, so it can never promise what checkout will not give.
- Three plain assurances close the box: no preservatives, the shelf life, and cash on delivery.
- On a phone, a bar with the price and Add to cart follows the customer down the page, so buying is never more than one tap away.

PRODUCT

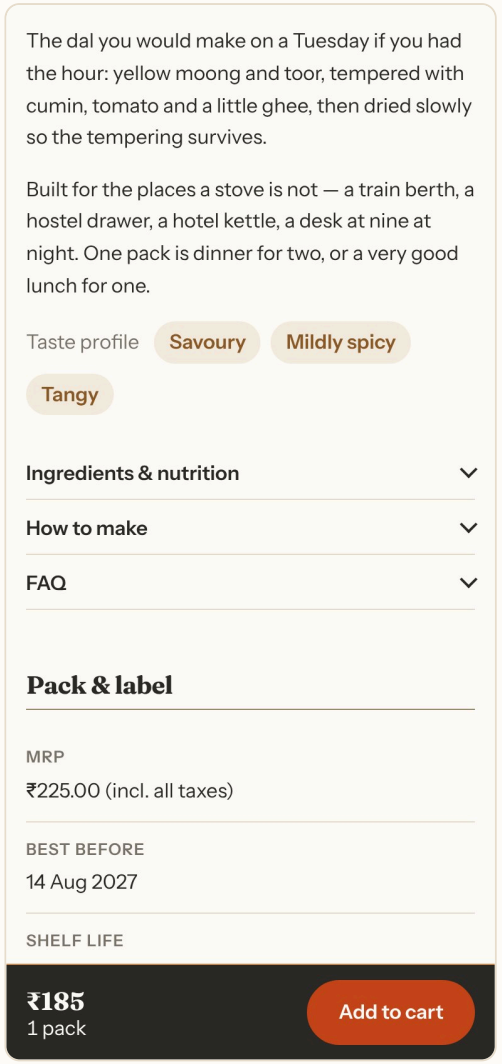

What is in it, and the pack declarations

The detail a careful buyer — and Legal Metrology — expects, without burying the page in text.

LAPTOP · THE TABBED BODY AND THE PACK TABLE

- **About · Ingredients & nutrition · How to make · FAQ** are tabs on a laptop and open-and-close sections on a phone. Same words, one place to edit them.
- **Pack & label is always open**, never hidden in a tab: MRP, best before, shelf life, country of origin, FSSAI licence, marketed by, consumer care.
- **Allergens and a nutrition panel on every pack.** A declaration you have not supplied is shown as **"Not provided"** rather than quietly left out, and the same fields feed your Google product listing.

PHONE · THE SAME, AS SECTIONS

PRODUCT

No surprises, before the cart

The questions a buyer asks just before tapping Add to cart — when will it come, what will it really cost — answered on the product page.

Express Dal Fry

BESTSELLER · JAIN · HIGH PROTEIN

★★★★☆ 4.7 (84 reviews)

~~₹225~~ ₹185 SAVE 17%

₹231.25/100 g

Net 80 g | Makes 260 g cooked | 2 servings | Ready in 6 min

Contains: milk, gluten

Delivers Tue 10 – Wed 11 Nov

To Gautam Buddha Nagar · Ships Mon 9 Nov.

2 offers: Pay online, save ₹25 · Free delivery from ₹599 ▾

- ✓ No preservatives
- ✓ Shelf life: 12 months
- ✓ Cash on delivery available

LAPTOP · THE BUY BOX AFTER A PIN CHECK

- **The delivery date comes from your courier's zones**, the dispatch cut-off and Sundays — "Order by 2 pm to ship today". An unknown PIN says so; it never guesses a date.
- **The PIN is remembered** on the next product and fills itself in at checkout, along with the city and state.
- **Sold out is not a dead end.** "Notify me" takes an email for one message when it is back — then the address is deleted. No mailing list.
- The photo brief now asks for a fifth shot: **the back of the pack, label legible** — ingredients, allergens and FSSAI number, the way marketplace shoppers check.

- ✓ Shelf life: 12 months

MRP includes all taxes.

A dry, spiced potato sabzi for parathas, puris or a slice of bread.

About ^

A dry potato sabzi with tomato and cumin. Good with parathas, better on a train.

Taste profile: Spicy · Savoury

Ingredients & nutrition ⌄

How to make ⌄

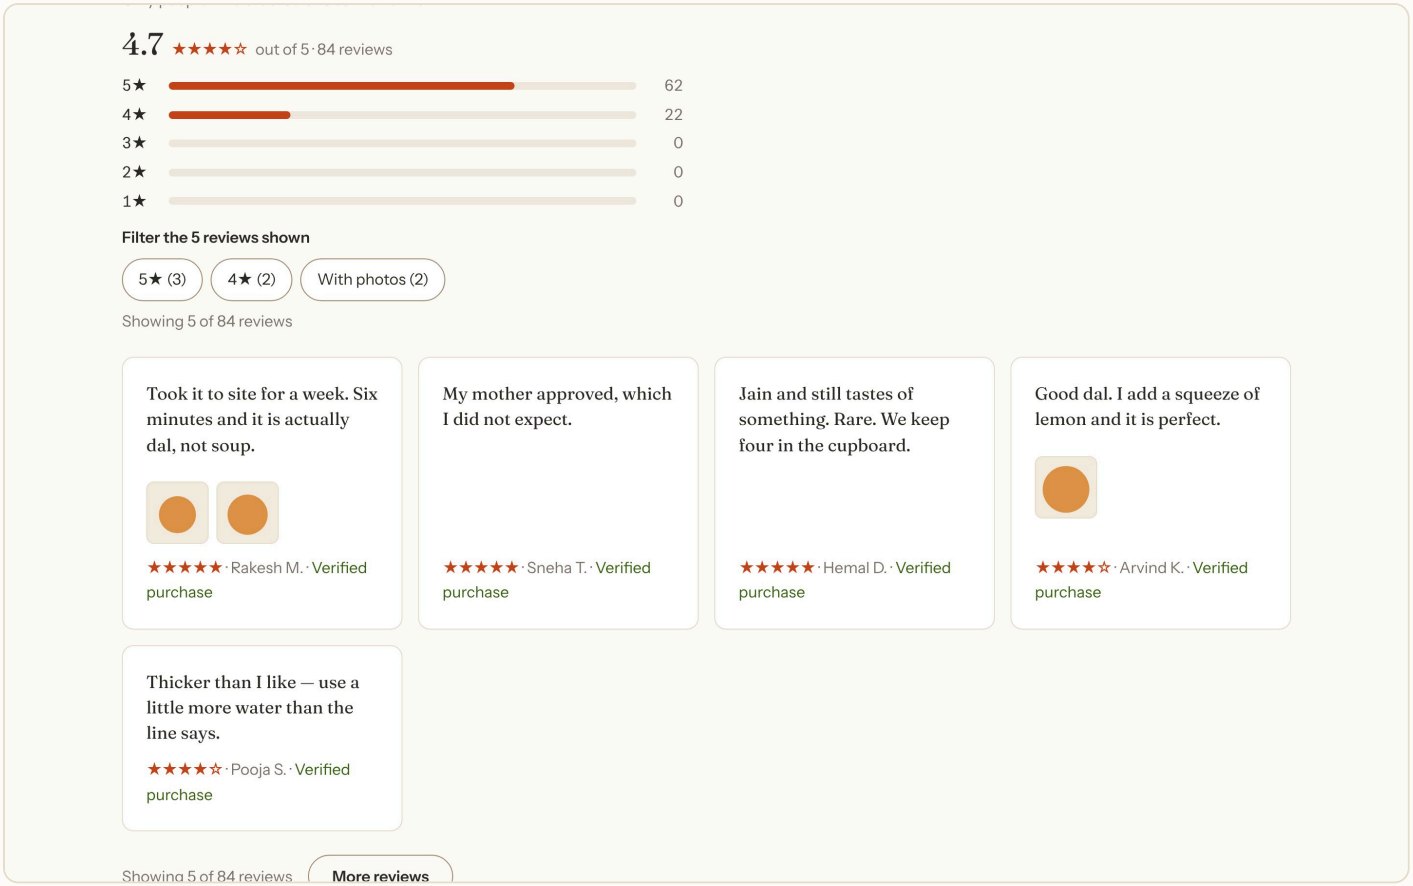

FAQ ⌄

PHONE · A SOLD-OUT PRODUCT

PRODUCT

Reviews you can read, and filter

Reviews only from customers who ordered the product, shown the way people actually read them.

LAPTOP · THE REVIEWS UNDER A PRODUCT

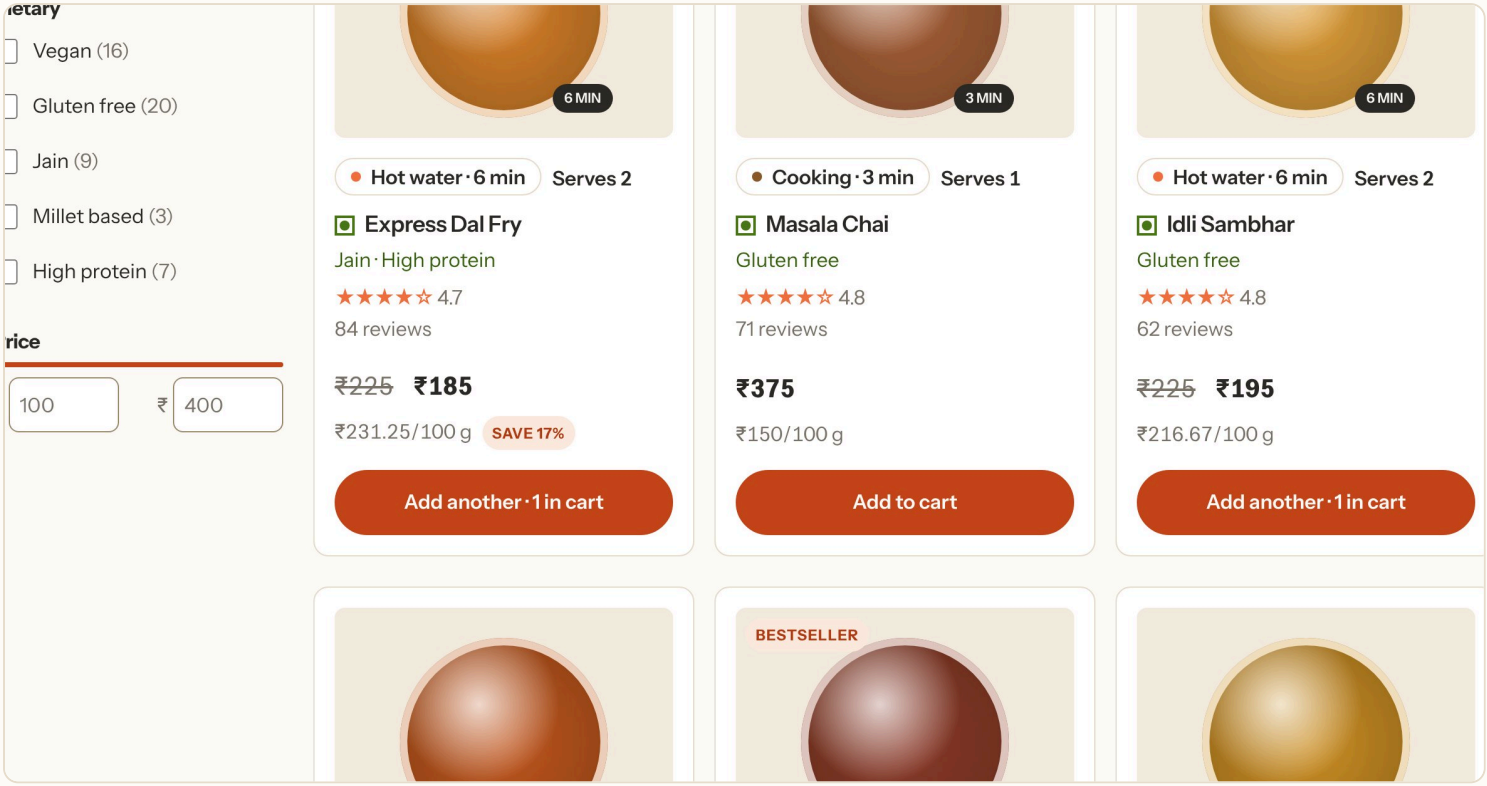

PHONE · FILTERED TO REVIEWS WITH PHOTOS

- **The spread, not just the average**: how many fives, fours and threes, so a 4.5 earned honestly reads that way.
- **Filter by stars, or "With photos"** — the count line always says how many are showing.
- **Customers who ordered can add up to three photos.** Each is checked by a person before it appears, and location and camera details are stripped from every photo.

FILTERS

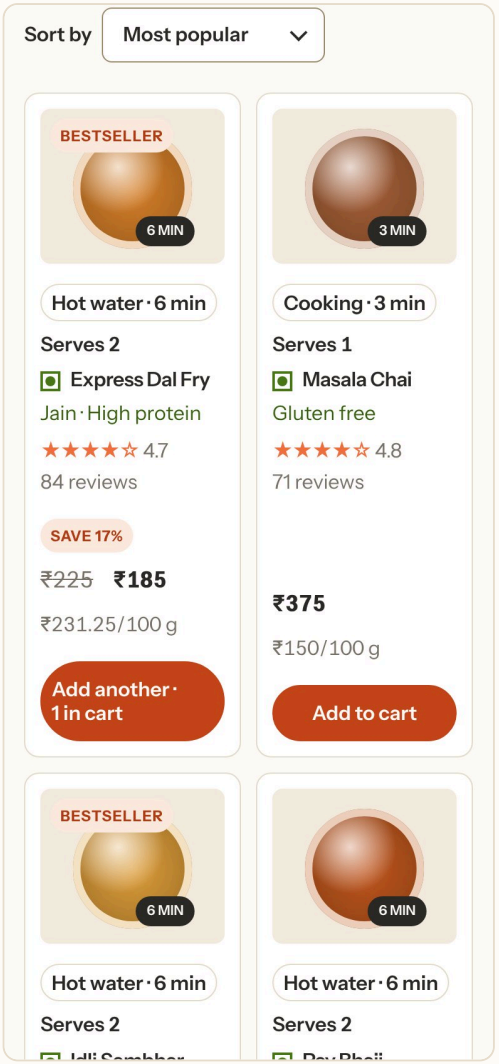

Narrowing 44 products to the three you want

Shown larger here because this is the machinery of the category page: on the audited site there is no way to filter at all.

LAPTOP · THE FILTER COLUMN AND THE SORT CONTROL, FULL SIZE

- **Prep method** — hot water, drinking water, requires cooking. The brand's own proposition, made filterable.
- **Dietary** — vegan, gluten free, Jain, millet based, high protein. A Jain customer finds their six products in one tap.
- **Price** — a range, not a set of bands nobody's budget matches.
- **Counts beside every filter**, so nobody taps into an empty result.
- **Sort is labelled** — "Sort by: Most popular" — rather than an unmarked icon.
- These come from product attributes, so adding a product to a category puts it in the filters automatically.

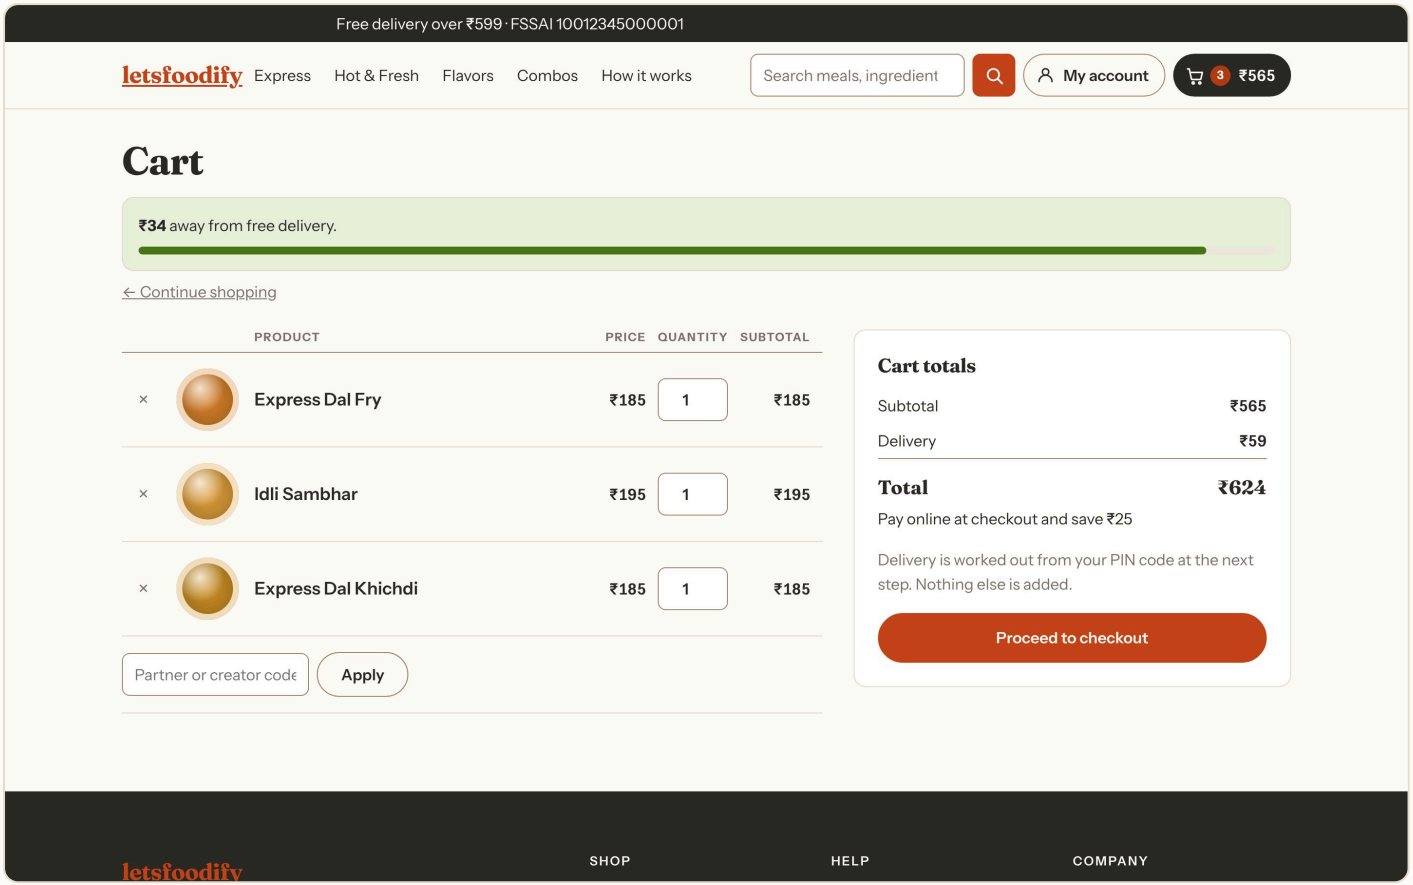

PHONE · THE PANEL OPEN

On a phone the column folds into a **Filter** button and opens as this panel, so the products stay on screen and nothing is lost.

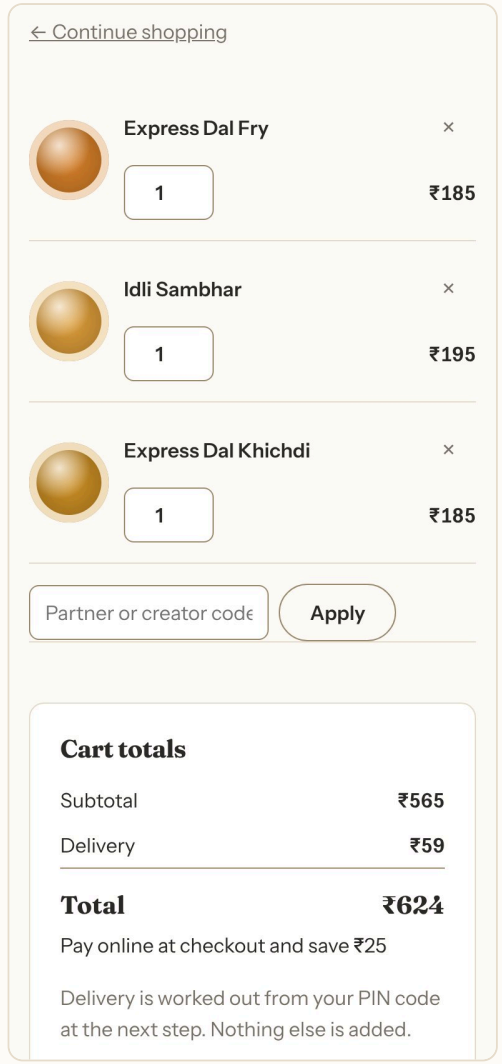

CART

No surprises

The audited site turned ₹210 into ₹285 at the final screen. This one shows the true cost before the customer commits.

LAPTOP · THE CART

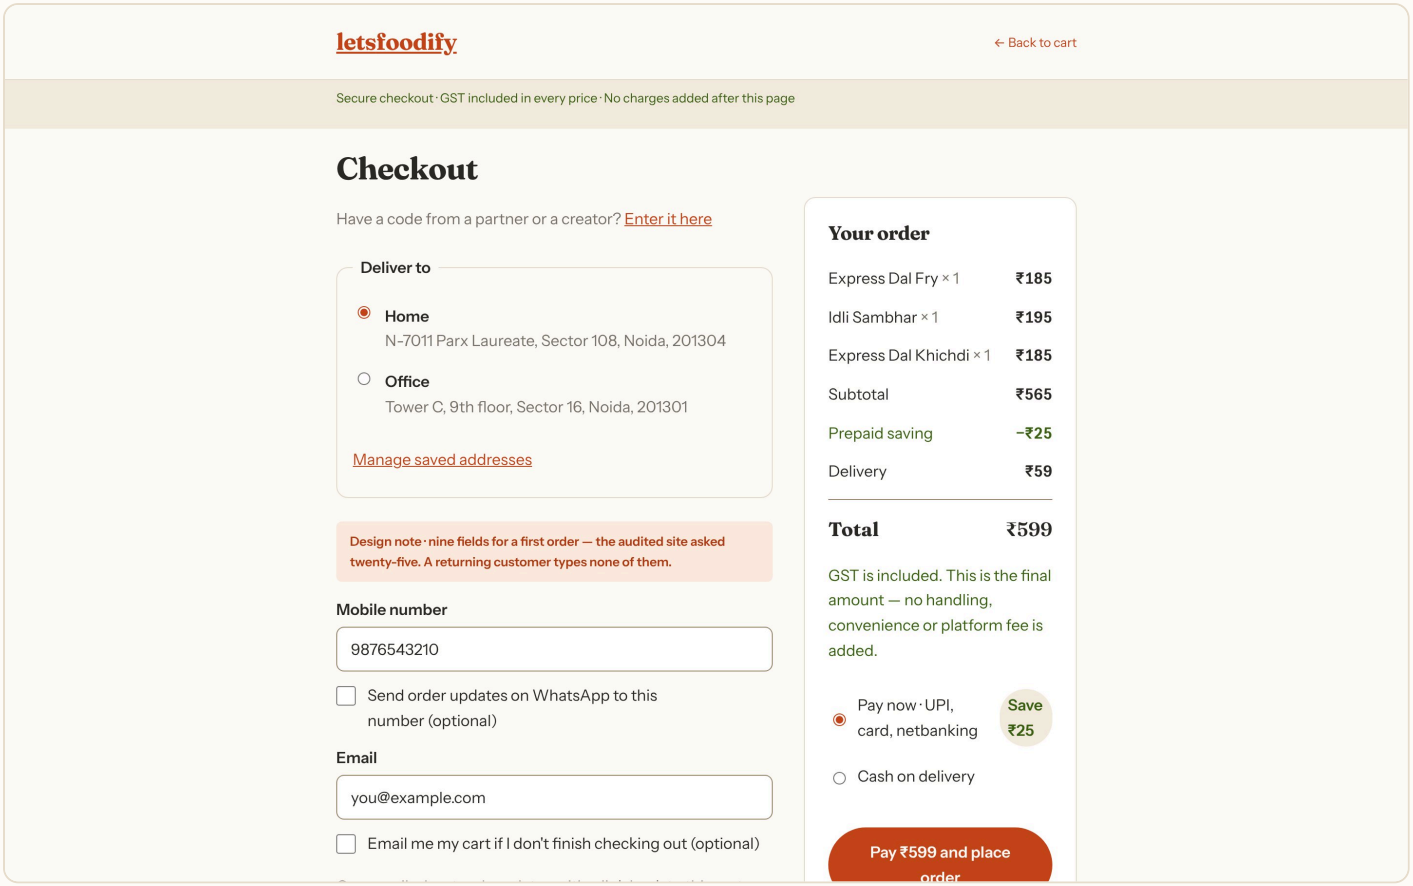

PHONE · ONE ROW PER ITEM

- A bar at the top says **how far the order is from free delivery** — the cheapest way to lift an average order value. It disappears when the cart is empty rather than leaving an empty green box.
- Quantity, remove and a partner or creator coupon field. Totals show GST included and **Delivery** as it will actually be charged — one word for it on every screen, never “Shipping” on one and “Delivery” on the next.
- A box is never dearer than its packs bought one by one: free delivery is judged on the cart before the box discount, so filling a box cannot lose it.
- **“Continue shopping”** is on the page, so the cart is never a dead end.

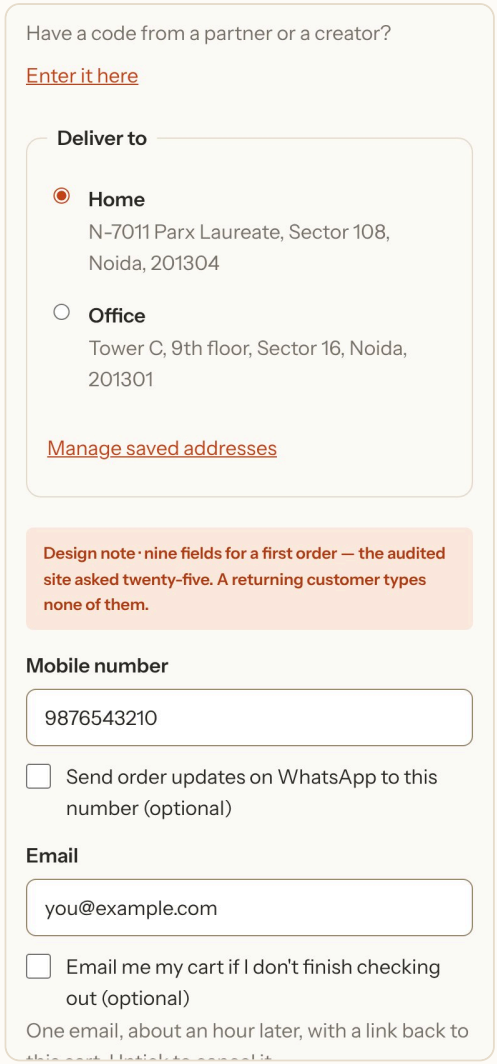

CHECKOUT

Nine fields, not twenty-five

The single biggest recoverable loss on the current site.

LAPTOP · CHECKOUT WITH A SAVED ADDRESS

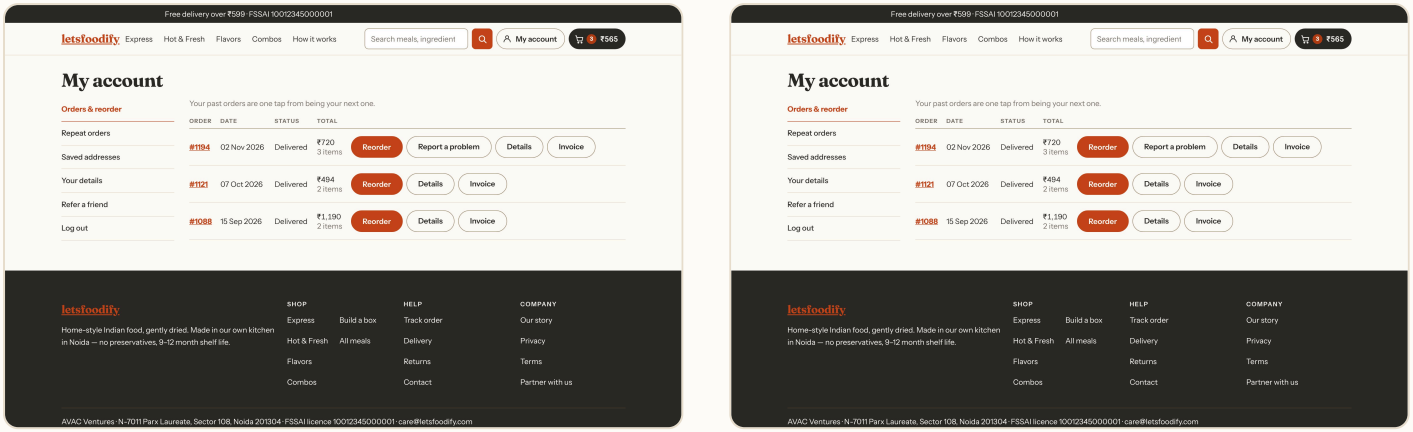

PHONE · THE SAME NINE FIELDS

- **Nine fields for a first order.** The PIN code fills in the city and state; the state is a list, not free text.
- **A returning customer types nothing** — they pick a saved address and pay.
- Cash on delivery sits beside online payment, with the prepaid saving named.
- The page has no menu to wander off into, and nothing is added to the price after this screen.
- **An address you do not deliver to stops the order**: a pop-up says so the moment the PIN is typed, and Place order stays locked until it changes.
- Two optional ticks, **off unless the customer ticks them**: order updates on WhatsApp, and one email with their cart if they do not finish.

ACCOUNT

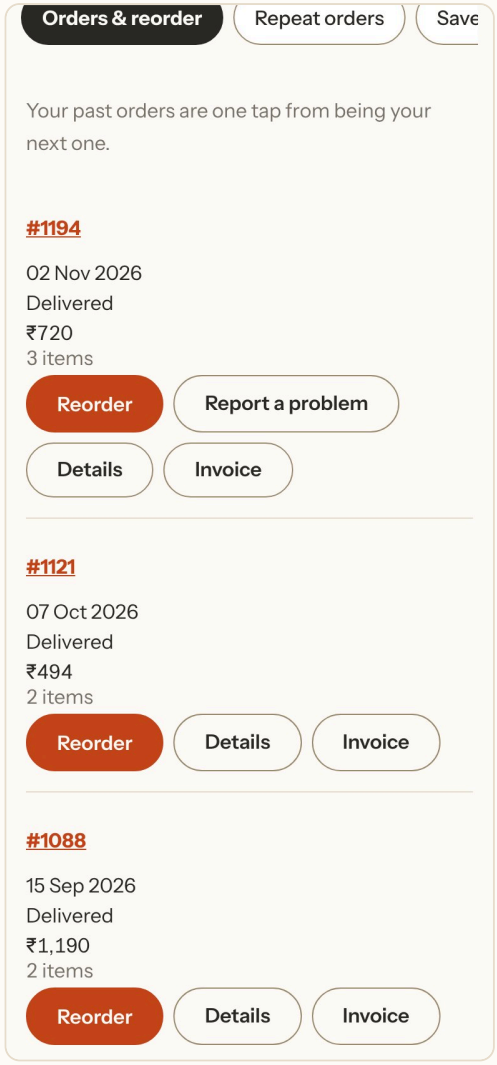

Coming back

Repeat orders are where a food brand makes its money. Signing in is a mobile number and a six-digit code — no password to forget.

LAPTOP · PAST ORDERS WITH ONE-TAP REORDER · SIGNING IN

- **Reorder** puts a past order back in the cart in one tap — the shortest path to a second sale.
- Saved addresses mean a returning customer never types an address again.
- Guest checkout stays the default: nobody is forced to make an account to buy.
- Sign-in by code depends on DLT registration for transactional SMS, which is yours to obtain; until it is done, the standard email-and-password sign-in stands in.

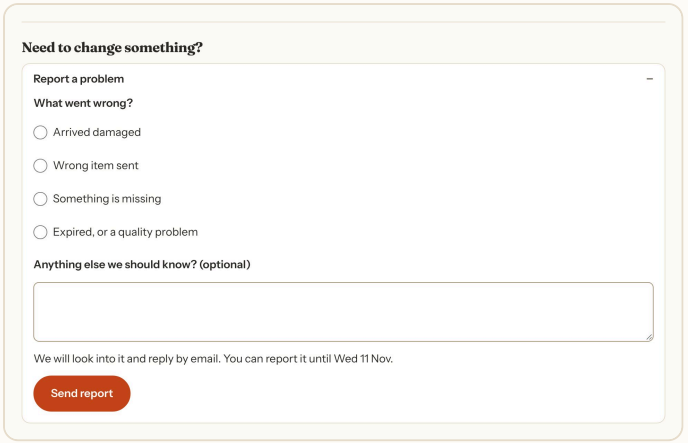

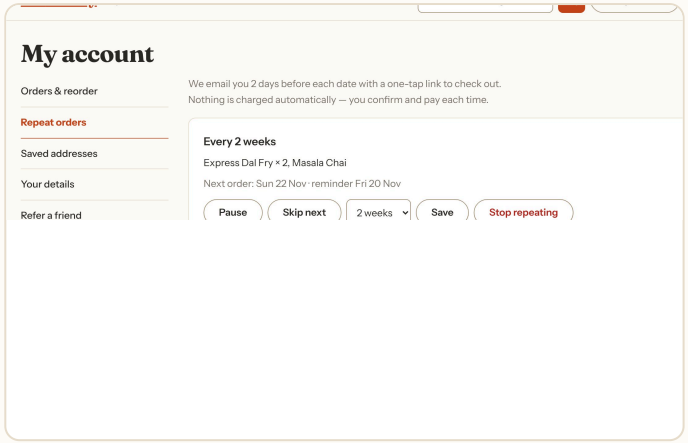

PHONE · THE ACCOUNT

ACCOUNT

After the order

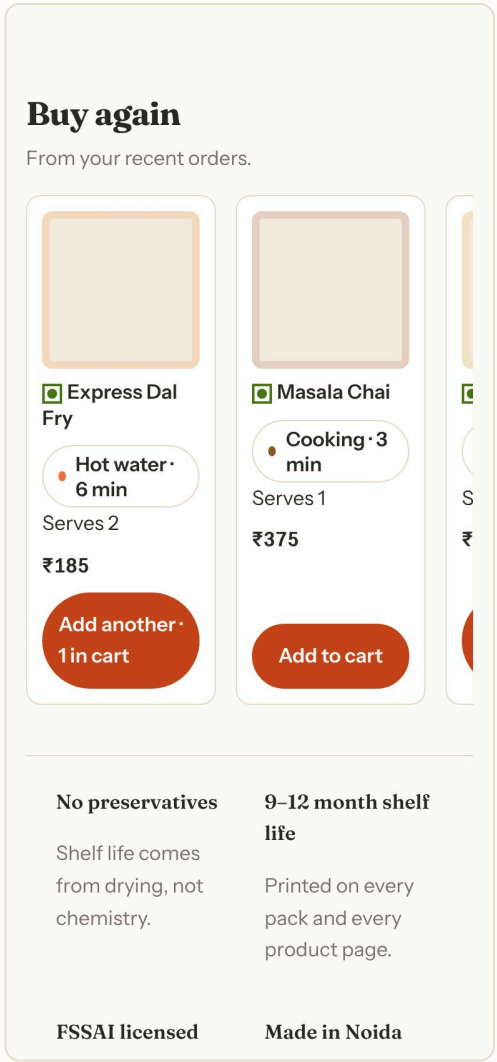

What Amazon customers expect to do themselves, without writing an email.

LAPTOP · AN ORDER'S OWN PAGE · THE REPEAT ORDERS PAGE

- **Cancel** until the order leaves your kitchen. A paid order is refunded to where it came from; if the automatic refund fails, the customer is told your team will send it by hand.
- **Report a problem** for a few days after delivery — damaged, wrong item, missing, expired — straight to you as a request, never an automatic refund.
- **Repeat this order** every 2, 4 or 6 weeks: an email two days before with a one-tap link. **Nothing is charged automatically** — the customer pays each time, and can skip, pause or cancel.

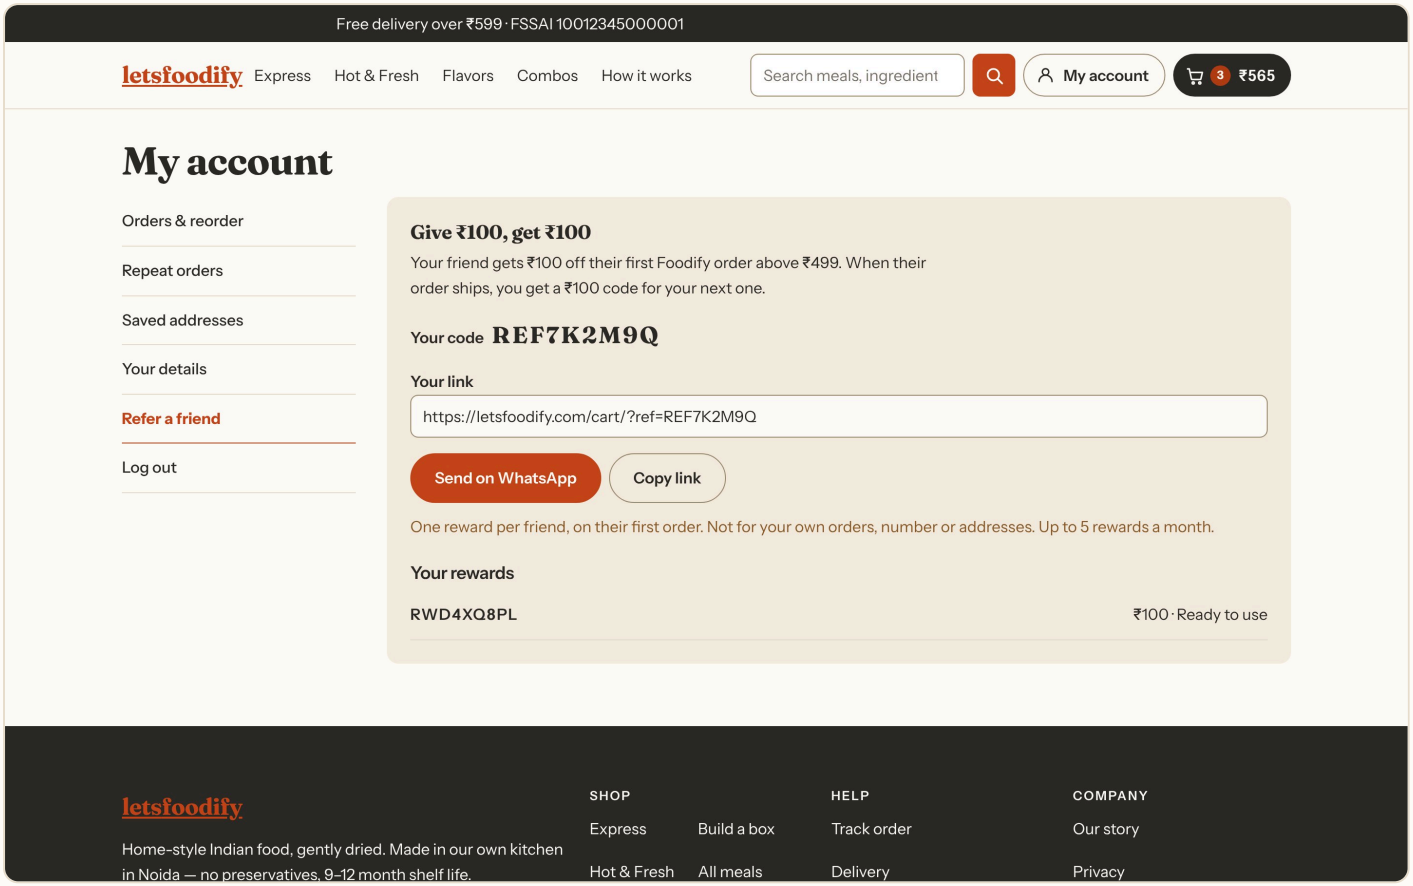

PHONE · BUY AGAIN ON THE HOME PAGE

A signed-in customer sees their recent items on the home page, one tap from the cart. It is never shown to anyone else.

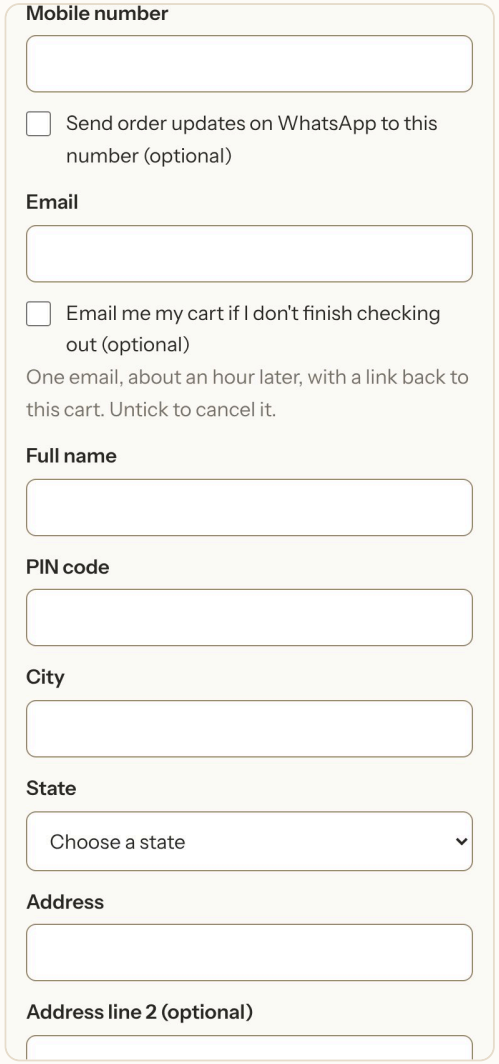

ACCOUNT

Refer a friend

A food brand grows by people telling each other. This gives them a reason, and stops it being gamed.

LAPTOP · THE REFER A FRIEND PAGE

PHONE · CHECKOUT'S TWO OPTIONAL TICKS

- **Give ₹X, get ₹X**: the friend saves on their first order; the customer gets a code once that order has shipped.
- Share on WhatsApp, copy the link, or read out the code.
- **Not for your own orders, number or addresses**, one reward per friend, a monthly cap, and a reward is withdrawn if the friend's order is refunded.
- Referral codes are kept apart from partner and creator codes, so they never count as a partner's sales.

REVIEW

Every screen, read as a customer would

Before this edition every screen was checked at phone width (390px) and laptop width (1280px), every button and link was tapped — about 3,500 taps per width — and each problem was confirmed before it was fixed. 94 findings; all four that could cost a customer money or an order are closed.

The four that mattered most

- A filled box could lose free delivery and cost **more** than its packs bought singly.
- Choosing a saved address at checkout did not fill the address in.
- A ₹59 delivery charge could survive after free delivery was earned.
- The fixed “3–5 days pan-India” line could contradict the date the PIN check gave.

What changed everywhere

- **Nothing a customer reads is under 16px**; nothing they tap is under a thumb (44px).
- A visible outline shows where the keyboard is, on every control.
- **One name per thing**: Delivery, Free delivery, Sold out, Report a problem.
- Errors say what went wrong and what to type instead.

What a laptop cannot test

Typing the six-digit code from an SMS, the number keypad, a cheap Android phone on 4G and screen readers on a real device. We have written a twenty-minute checklist for a real phone; it is the last step before launch.

Design calls we made — say if you disagree

Tablets show the menu button rather than squeezing five links in. · On phones the filters start folded and the Save badge sits above the price. · Cards carry one extra line: Jain, vegan or gluten free as words. · The phone cart button shows how many items, not the total.

Things only you can confirm

Is “No preservatives” true of every product? It now appears on each product page. · **Box savings:** at the current prices five of the six boxes save under 15%, so they show the saving in rupees but no Save badge. · **Where you deliver**: an address outside your delivery zones now stops the order with a pop-up, as you asked — so the zones list has to name every state you serve.

What is invented in these pictures, and needs your word

So nothing here is mistaken for a decision already taken. Each of these is a question for you; until you answer, the site shows the honest version — for example, a licence number it has not been given prints as *NOT CONFIGURED*.

FSSAI licence number

Shown as 10012345000001 so the layout is right. We need the real number — it belongs on the header strip, every product page and every invoice.

Same-day dispatch in Delhi NCR

Written into the header and the product page as a promise. Only keep it if operations can hold it every working day.

“Complete the meal” pairings

Which products go with which — a chutney with a dal, a chai with a khichdi. We have guessed; you know.

Per-product copy

Taste notes, cooked weight and the two or three questions customers actually ask about each SKU. The fields are built and empty.

Photography

Five shots per product, in this order: pack front, prepared in a bowl, ingredients laid out, one in a hand or beside a mug, and the back of the pack. The first is what Google Shopping uses.

Prices and reviews

Sample values from the catalogue. Real prices, stock and reviews come from your WooCommerce back office, which is unchanged.

The boxes themselves

Trial, Week, Hostel and Chai & Chutney are our guess at a range. Which boxes exist, what goes in each and what they cost is yours to set.

What a box saves

Each box needs the figure its contents cost bought separately. The page calculates the saving from that — it never guesses one.

How to answer

A reply naming the boxes, their contents and the two prices for each is enough. Everything else on this page can follow later.

What the new features need from you

Each of these features stays hidden on the live site until you set its numbers. The pictures use our guesses, named here so none of them is taken as decided.

Delivery zones

Which areas your courier reaches in how many days, your dispatch cut-off and the days you do not dispatch. The PIN check shows nothing until these exist.

Box sizes and discounts

Shown as 3, 6 and 9 packs at 5, 10 and 12% off. Should a box also take a partner code? Which packs, if any, are left out?

Returns window

Shown as 7 days after delivery. When you mark an order as dispatched also decides when cancelling stops.

Referrals

Shown as give ₹100, get ₹100 on a first order over ₹499. Your amounts, the minimum order and a monthly cap.

Repeat orders

How many days' notice (we suggest 2), and whether repeat orders get a discount. With no discount the page says "Repeat this order", never "save".

WhatsApp

Meta charges per message. It stays off until you approve that, choose the number and the message templates are approved.

Names people search by

Hindi and regional names for each product ("राजमा", "poha"), typed once into the product editor.

An online payment gateway

None is set up yet, so "pay online and save ₹25" cannot apply on the live site until one is.

How to answer

Our full list has sixteen short questions. A reply to the first three cards is enough to start testing.

What happens next

The build is complete in code and checked by 36 automated test suites that run before anything can be deployed. What is left is your input and a launch week.

1 · From you

FSSAI licence number · GST details · product photography and pack weights · payment gateway and SMS credentials · answers to the six questions on the previous page.

2 · On a test site

The new front end is installed beside a copy of your shop, with real products and real orders, and checked end to end — including a real payment and a real invoice.

3 · Launch week

The switch happens on the same WooCommerce back office you already use. Orders, customers and product web addresses are kept exactly as they are, so nothing that ranks on Google is lost.

What does not change

Your products, your order history, your customers and your admin remain where they are. This project replaces the layer the customer sees — not the shop behind it. If anything goes wrong in launch week, the old front end can be put back the same day.

Send the six answers on the previous page and the test site can be standing the same week. Anything in these pages can still be changed — that is what a review is for.
